LONGBOW HORSEMAN UNDERGROUND MINING ENTERPRISE

Investor Profile • Mountain West Critical Minerals & Precious Metals

Christopher D. Iorg • Box Elder County, Utah • longbowhorseman@gmail.com • longbowhorsemanenterprise.com

---

The Opportunity in One Paragraph

The Mountain West is the most mineral-rich and historically proven mining region in North America, and the U.S. government has invested $10 billion in domestic critical mineral supply chains in the past 18 months. Hundreds of historic mines were abandoned with ore still in the ground. Old tailings piles contain recoverable mineral value while posing environmental liability. Longbow Horseman has already secured Union Pacific shipping and receiving approval through a rigorous two-year application process — logistics infrastructure that most junior mining companies never obtain. Longbow Horseman Underground Mining Enterprise is assembling the team, the capital, and the operating philosophy to build the most responsible, most strategically positioned small-to-medium underground mining company in the Mountain West.

What Makes This Different

- Underground-first, minimal surface disturbance — the most defensible mining model in an era of ESG scrutiny
- Tailings remediation dual-revenue model: recover minerals while cleaning up historic environmental liabilities — earns regulatory goodwill and Superfund co-funding eligibility
- Union Pacific rail access in Box Elder County — dramatically lower transport costs and the opportunity to build a regional all-purpose mineral shipping and receiving hub serving the full Mountain West mining economy
- Vast public land opportunity: BLM and Forest Service lands with documented mineral potential, transparent permitting, and decades of historic production records available for systematic targeting
- All mineral types — gold, silver, copper, lithium, rare earths, antimony, tungsten, and base metals. We follow the ground, not a single commodity thesis
- Union Pacific shipping and receiving approval already secured — earned through a two-year application process that most mining companies never complete. The rail logistics infrastructure is in place before the first ton of ore is moved
- Underground livable environment design: every facility is built for dual use — mineral extraction plus a community public safety asset, emergency shelter, private facility, or family bunker

depending on whether it is public land or a private claim. The mine funds the excavation. The community or landowner keeps the space

Partnership Model for Existing Claim Holders

Landowners and mining claim holders with significant deposits don't need to capitalize a full mining operation themselves. Longbow Horseman's team comes in, does the work, produces the minerals, improves the local economy with the newly available resources, and builds a safe, engineered underground space that remains the property owner's permanent asset. On public lands, that space becomes a community facility. On private claims, it becomes a personal underground facility of the landowner's choosing — shelter, storage, cold facility, or anything else the ground can support. The mineral value pays for the excavation. The space belongs to you.

The Founder

Christopher D. Iorg was raised on horseback in the mineral-rich terrain of the Uintah Basin and Ashley National Forest — a lifetime of reading Mountain West ground that cannot be replicated in a classroom. He helped manufacture precision composite parts for the F-35 Joint Strike Fighter. He has managed hundreds of large commercial construction projects across the Midwest and Pacific Northwest, held a Level 2 federal security clearance, and is the author of a published civic entrepreneurship book with formal proposals submitted to the U.S. President and Pentagon. He is assembling the team to make this the best American underground mining company in the Mountain West.

Capital Sought

- Phase 1 — Prospecting & Target Identification: $250K–$750K
- Phase 2 — Exploration & Resource Definition: $1M–$5M
- Phase 3 — Tailings Processing & Historic Mine Rehab (near-term cash flow): $500K–$2M
- Phase 4 — Production & Rail Logistics Hub: $5M–$20M+

Federal Funding Aligned with This Enterprise

- DoE Critical Minerals & Materials Accelerator — $69M available (April 2026)
- DoD Defense Production Act Title III — direct investment for critical mineral supply chain
- EPA Brownfields Program — tailings remediation co-funding
- USDA Rural Business Development — rail logistics hub infrastructure

This enterprise is currently awaiting capital and strategic partners before formal incorporation.
